

## **Assignment Two – Part 2**

### **A Personnel Lighting Analysis – Part Two / A Mock-up**

With your analysis complete, the second part of this assignment is to demonstrate and document a proposed solution to improve or enhance the lighting quality at **ONE of your task locations** - a space where you **Eat, Study, Dress, or Groom**.

Lighting is visual, and lighting designers spend a great deal of their time testing light to see its results, turning on fixtures and lamps to see how they perform, or building mock-ups to demonstrate a lighting effect or model of a luminaire.

You are asked to perform a mock-up to demonstrate your intent (we will review options together during a desk review). Your solutions may be temporary. Here are a few suggestions to improve the quality of light:

- Move existing fixtures around to improve distribution or uniformity
- Add new fixture(s) or create a lighting effect
- Alter a fixtures distribution
- Fabricate a new light fixture

Documentation must include the following:

- Photos demonstrating a before and after effect
- Image or catalog cut of the light fixture(s) intended to be installed for the proposed solution
- A personnel comment describing the intent and results.

**Format:** 8.5 x 11 (stapled sheets okay, be sure to include your name on all the sheets)

**Deadline: 8 November, hand in a copy for review – no in-class presentation**
